SAT Team Project Documentation

<u>Day 1:</u>

- As a team, we put together a Trello board and began working on some of the basic framework for our application such as the theme, layout, and template.

- Once we decided on a theme for our university we created a database to house all of our student and course information

- Once the layout was chosen and converted to MVC, we began making UI decisions to improve the look and feel of the application

- With the database complete and the template converted, Entity Framework and Identity Framework were implemented
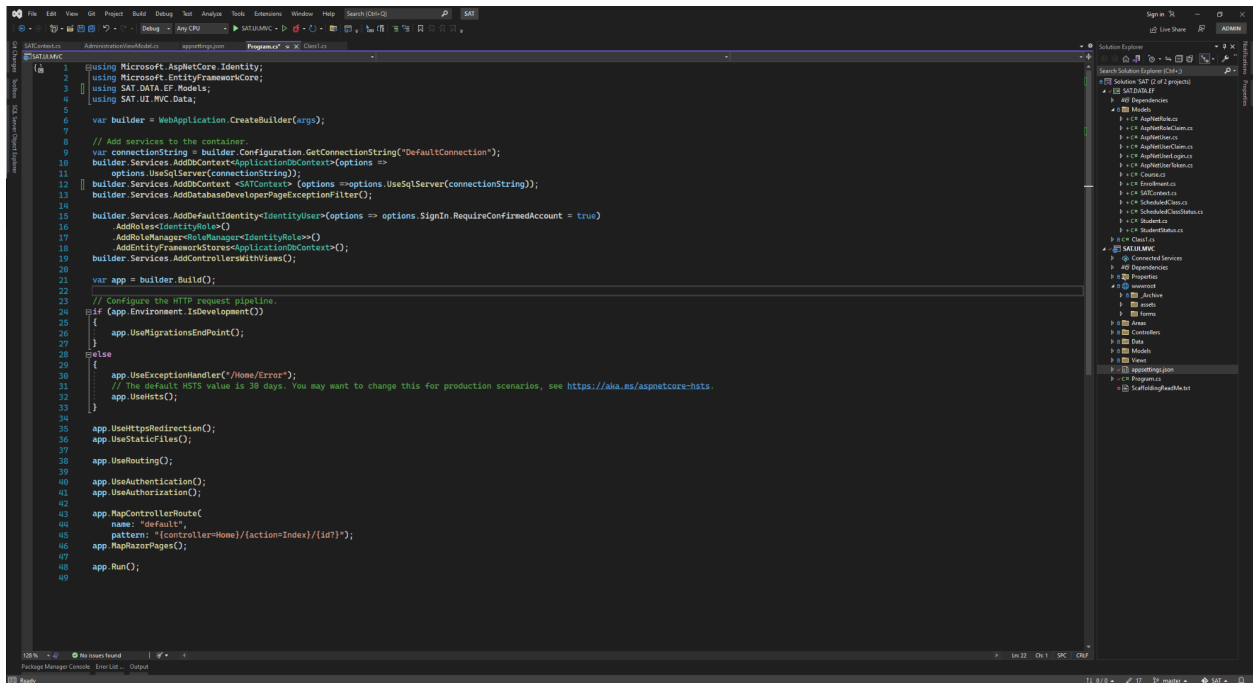

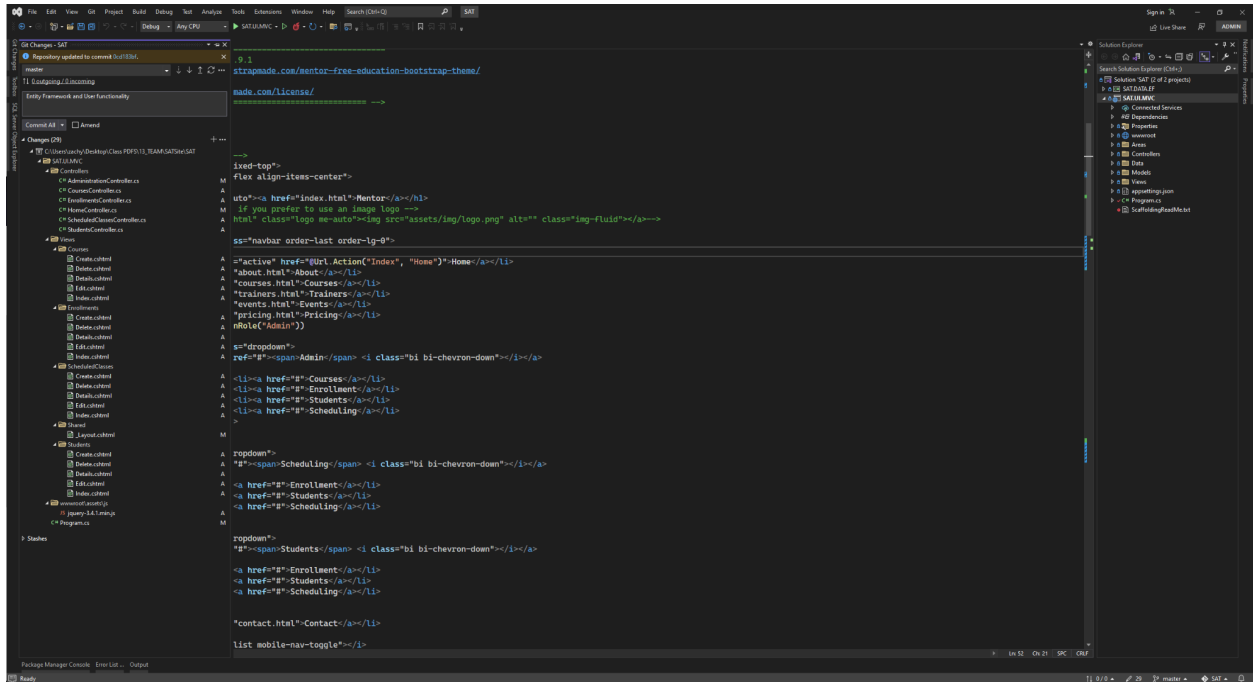

- At the end of Day 1, we documented our progress in our Trello board and added items to the backlog for Day 2.

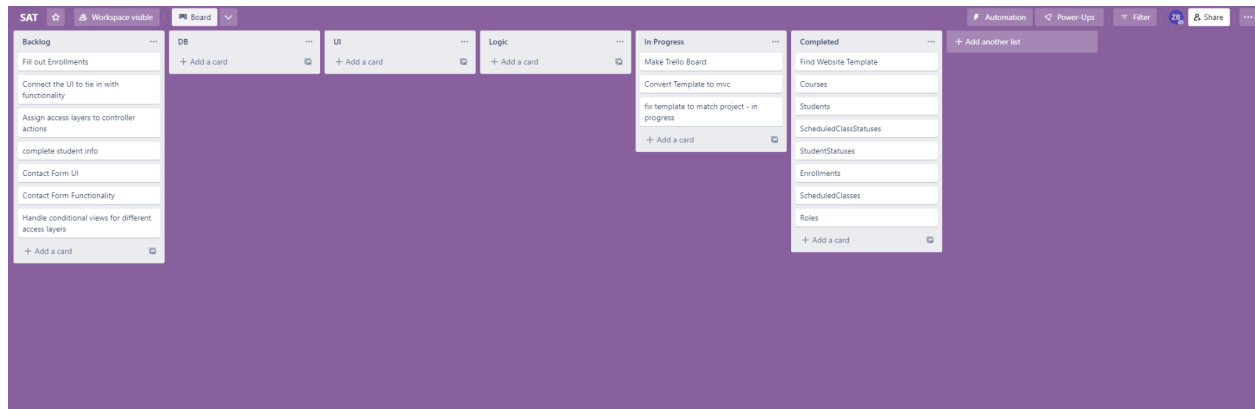

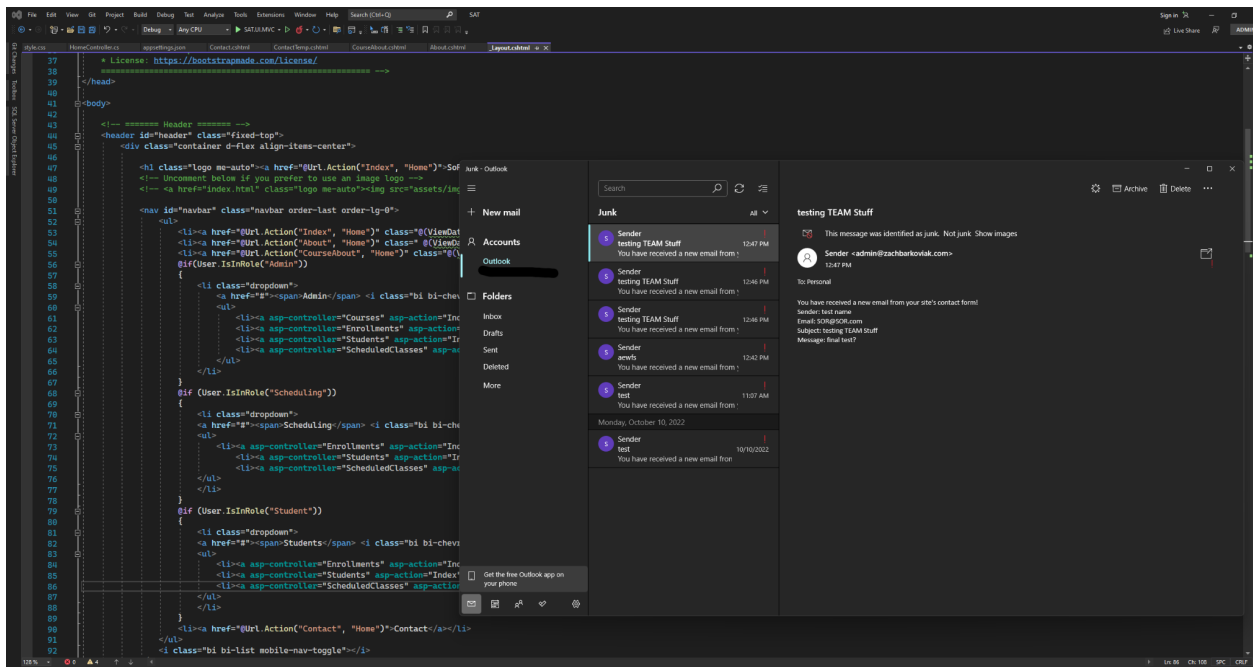

Day 2:

- Day 2 started with UI improvements
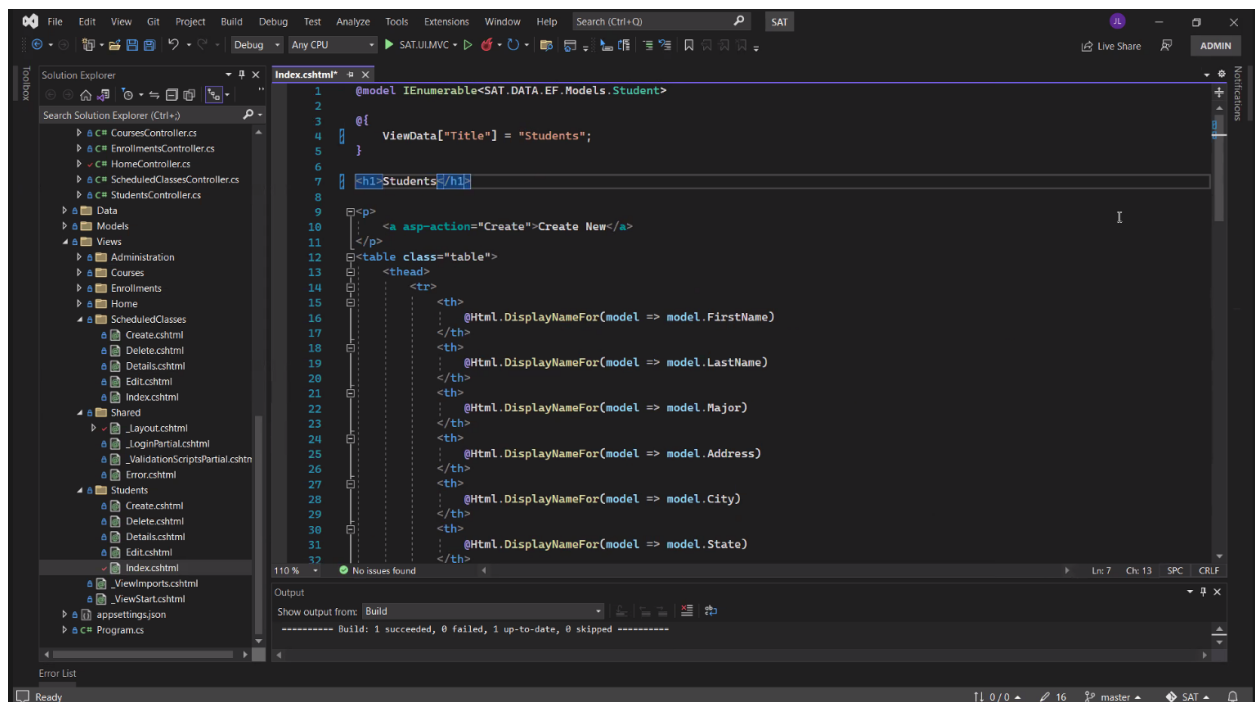

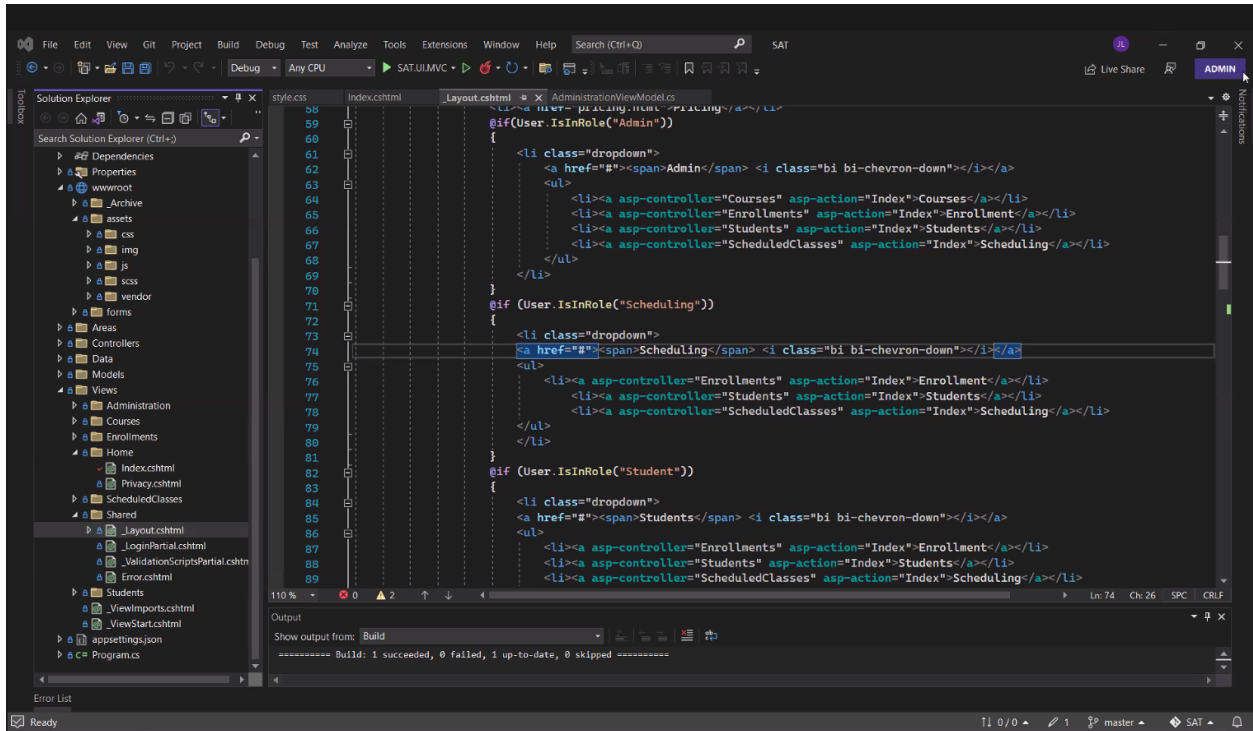

- Controllers were locked down and a functional contact form was added

- At the end of Day 2, we had our first iteration of the completed application and we began working on polishing existing features and planning out additional ones.
